

Tomorrow's science today

Experts at the expo

The Dairy Futures CRC is a large-scale partnership between dairy farmers, pasture and cattle breeding companies and researchers. It works with a broad range of new 'bio' sciences to deliver real gains for dairy farmers. The South Gippsland Dairy Expo has invited scientists from the CRC to visit and have a chat about genomics.

The interactive session is jam-packed with interesting info:

- An explanation of what Dairy Futures CRC is trying to achieve from Dr David Nation (CEO Dairy Futures CRC)
- A rundown on designer forages from Prof John Forster (Principal Research Scientist Molecular Genetics, DPI Vic)
- An update on the latest in improved animal breeding and genomics from Dr Jennie Pryce (Senior Research Scientist Quantitative Genetics, DPI Vic)
- Discussion around how genomics is being used by farmers from Dr Matthew Shaffer (CEO Holstein Australia)
- Hear about how the CRC is investing in the future of your industry through its youngest researchers, the PhD students
- Have lunch with a scientist and enjoy the opportunity to ask questions and have a chat face to face.

Time: 12–2pm

Date: Wednesday
28 September 2011

Place: Korumburra Showgrounds

FREE after entering the
South Gippsland Dairy Expo
